

1 FEW

Table 1: H5–H11: BC vs. named-scenario contrasts.

contrast	estimate	se	N
BC vs BI	0.731***	(0.062)	52
BC vs BG	0.679**	(0.063)	56
BC vs BN	0.464	(0.067)	56
BC vs BC_SD	0.597	(0.058)	72
BC vs BCmat	0.519	(0.056)	81
BC vs BCflight	0.781 [†]	(0.052)	64
BC vs BCbeef	0.556	(0.059)	72
R-squared	0		

Notes: Estimate = share choosing BC (HC1-robust SE in parentheses). *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$ (FDR-adjusted). One-sided test direction per pre-registration: H5–H9 (BI/BG/BN/BC_SD/BCmat) test H1: share > 0.5 (BC preferred); H10–H11 (BCflight/BCbeef) test H1: share < 0.5 (the alternative scenario is preferred). [†] = significant (two-sided, unadjusted $p < 0.1$) in the direction OPPOSITE the pre-registered hypothesis - a real effect, just not the one predicted. R2 is 0 by construction (intercept-only models).

Table 2: Bradley–Terry ranking of the 12 named scenarios.

scenario	ability	se	N
BC	ref.		720
BN	-0.027	(0.127)	356
BCmat	-0.126	(0.118)	416
BC45k	-0.233*	(0.122)	379
BG	-0.264**	(0.122)	388
BC90k	-0.350***	(0.120)	404
BCbeef	-0.443***	(0.122)	374
BCflight	-0.538***	(0.128)	334
BI	-0.585***	(0.132)	319
BC_SD	-0.615***	(0.122)	389
BC120k	-0.725***	(0.124)	376
BI120k	-0.999***	(0.126)	393
R-squared	0.034		

Notes: Ability = log-strength relative to BC (reference, fixed at 0); SE in parentheses. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$ (FDR-adjusted Wald test vs. BC). R2 = McFadden pseudo-R2.
