

1 FEW

Table 1: H5–H11: BC vs. named-scenario contrasts.

contrast	estimate	se	N
BC vs BI	0.643***	(0.040)	84
BC vs BG	0.606**	(0.038)	94
BC vs BN	0.478	(0.041)	92
BC vs BC_SD	0.563	(0.038)	111
BC vs BCmat	0.513	(0.039)	117
BC vs BCflight	0.707 [†]	(0.041)	87
BC vs BCbeef	0.538	(0.040)	105
R-squared	0		

Notes: Estimate = share choosing BC (HC1-robust SE in parentheses). *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$ (FDR-adjusted). One-sided test direction per pre-registration: H5–H9 (BI/BG/BN/BC_SD/BCmat) test H1: share > 0.5 (BC preferred); H10–H11 (BCflight/BCbeef) test H1: share < 0.5 (the alternative scenario is preferred). [†] = significant (two-sided, unadjusted $p < 0.1$) in the direction OPPOSITE the pre-registered hypothesis - a real effect, just not the one predicted. R2 is 0 by construction (intercept-only models).

Table 2: Bradley–Terry ranking of the 12 named scenarios.

scenario	ability	se	N
BC	ref.		720
BN	-0.027	(0.127)	356
BCmat	-0.126	(0.118)	416
BC45k	-0.233*	(0.122)	379
BG	-0.264**	(0.122)	388
BC90k	-0.350***	(0.120)	404
BCbeef	-0.443***	(0.122)	374
BCflight	-0.538***	(0.128)	334
BI	-0.585***	(0.132)	319
BC_SD	-0.615***	(0.122)	389
BC120k	-0.725***	(0.124)	376
BI120k	-0.999***	(0.126)	393
R-squared	0.034		

Notes: Ability = log-strength relative to BC (reference, fixed at 0); SE in parentheses. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$ (FDR-adjusted Wald test vs. BC). R2 = McFadden pseudo-R2. "I don't know" pairs excluded (Bradley-Terry requires a discrete winner); contrast with the other tables, where they are kept as indifference (selected = 0.5).

2 ANY

Table 3: H1–H4: primary specification results.

	estimate	se
Temperature	-0.053***	(0.005)
Income (per 1k/month)	1.31e-06	(1.63e-05)

Figure 1: Share of cases choosing the preferred (BC-referenced) value, per attribute. *“I don’t know” pairs excluded (no side is chosen under indifference).*

3 IDK

Table 11: Frequency of “I don’t know” responses.

Task	N	N (IDK)	estimate	se
Task 1 (FEW)	3,555	1,131	31.8%	(0.8%)
Task 2 (ANY)	3,555	963	27.1%	(0.7%)
Task 3 (ANY2)	3,555	968	27.2%	(0.7%)
Any of the 3 tasks	3,555	1,565	44.0%	(0.8%)

Notes: By task, and for any of the 3 tasks. SE in parentheses (normal approximation).

Figure 2: Supplementary: share of cases choosing the highest value, per attribute. “I don’t know” pairs excluded.

Table 12: Predictors of “I don’t know” responses.

	estimate	se
Age: 35-54 (vs. 18-34)	0.0403**	(0.0189)
Age: 55+ (vs. 18-34)	0.0494**	(0.0196)
Gender: Male (vs. Female)	-0.0627***	(0.0127)
Region: Northeast (vs. Northwest)	0.0023	(0.0190)
Region: Center (vs. Northwest)	-0.0106	(0.0185)
Region: South (vs. Northwest)	0.0086	(0.0176)
Region: Islands (vs. Northwest)	0.0101	(0.0240)
Education: Upper secondary (vs. Compulsory/lower)	-0.0345	(0.0252)
Education: Tertiary (vs. Compulsory/lower)	-0.0873***	(0.0265)
Task: 1/FEW (vs. Task 2/ANY)	0.0473***	(0.0072)
Task: 3/ANY2 (vs. Task 2/ANY)	0.0017	(0.0067)
Observations	3,551	
R-squared	0.014	

Notes: Sociodemographic characteristics and task/scenario features. Pooled linear probability model across the 3 DCE tasks, cluster-robust respondent-level SE in parentheses. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$. Baselines: Age vs. 18-34; Gender vs. Female (“Other”, $N=4$, excluded); Region vs. Northwest; Education vs. Compulsory/lower secondary; Task vs. Task 2 (ANY). Political orientation not yet available (placeholder pending wave 1 merge).

Figure 3: AMCEs for Task 2 and Task 3 (temperature/income binned into quartiles), superimposed. “I don’t know” pairs excluded (`cjoint::amce()` requires a strict 0/1 matched pair).

Figure 4: Growth $\times$ attribute interaction coefficients, primary specification.

Figure 5: Coefficients of the best-fitting (highest adjusted R^2) secondary specification.
